Education

University of Wisconsin-Madison
Bachelor of Science in Computer Science *Madison, WI*

Experience

Teletracking Technologies **November 2025 – Present**
Software Engineer - Foundry AI *Pittsburgh, PA*

- Built a React/TypeScript admin suite on Palantir Foundry (OSDK) enabling healthcare clients to self-configure 30+ medical dictionaries, facility hierarchies, and HL7 message transformations, reducing reliance on engineering intervention
- Built real-time AI call transcription system linking audio files to patient-transfer cases via Palantir OSDK ontology relationships, with searchable history and live subscription updates serving 12+ hospital networks.
- Architected cross-application header module with role-based licensing using React hooks, TanStack Query, and RESTful APIs — now shared infrastructure across 5+ micro-frontends and used by 300+ internal users daily.
- Cut Palantir OSDK query latency by 45% across the AI Foundry frontend by introducing TanStack Query caching, request batching, and selective ontology field fetching, improving page-to-interactive time on patient-transfer dashboards
- Translated clinical workflows into configurable product requirements with hospital clients, driving customer-specific features including US/UK terminology, HL7 transformations, and facility management workflows.
- Led customer implementations, diagnosing production issues across React, Palantir OSDK, and backend services while deploying workflow-specific solutions across 12+ hospital environments and reducing implementation time by 33%.

Samsung Electronics **August 2024 – October 2025**
AI Software Engineer *South Korea*

- Shipped LLM-powered UI component discovery platform integrating Node.js microservices, React, and RESTful APIs — adopted internally by tooling used by 78,000+ employees across Samsung divisions.
- Designed and built reusable component library in React + Tailwind, standardizing UI patterns across 6 internal tools and cutting new-feature development time by an estimated 30% per team feedback.
- Engineered a RAG pipeline using LLM embeddings to semantically retrieve relevant UI components across Samsung's internal component ecosystem, reducing LLM API costs by 40% while maintaining sub-500ms p95 latency.
- Built agent-based workflows that automated multi-step component discovery and recommendation, reducing manual developer search time by 13% across Samsung's internal tooling.

Forbes **June 2024 – August 2024**
Software Engineer Intern *New York, NY*

- Rebuilt Forbes.com/quotes (1.8M+ MAU) with React, Next.js, and Redis-cached SSR, cutting page load time by 35% and lifting mobile Lighthouse scores into the 90s.
- Refactored 10+ React components and introduced lazy loading across the quote module, reducing client-side bundle size and improving New Relic-tracked Time-to-Interactive by 25%.
- Partnered with data team to tune 15 GraphQL endpoints and 5 TypeScript resolvers, lowering P95 API latency by 34% under Postman load tests.

People And Robotics Lab **September 2023 – May 2024**
AI Research Intern *Madison, WI*

- Implemented CNN/RNN video analysis pipeline with Detic-based object detection in PyTorch, improving video summarization accuracy and cutting analysis time by 32%.

Société Générale Corporate and Investment Banking **June 2023 – August 2023**
Software Engineer Intern *New York, NY*

- Built data visualization dashboards for financial analysts using Flask, JavaScript, and SQL, with role-based authentication; reduced manual analysis time by 18% on a 6-person Agile team.

Technical Skills

Programming Languages: TypeScript, JavaScript, Python, Go, Java, SQL
Frameworks/Libraries: React, Next.js, React Native, Node.js, Django, Flask, Tailwind
Tools/Technologies: AWS, PostgreSQL, Redis, Docker, GraphQL, REST, Palantir OSDK, Foundry
AI/ML: LLMs, RAG, AI Agents, Prompt Engineering, Embeddings, OpenAI API, PyTorch
AI assisted development: Cursor, Claude Code, Codex, LLM-Driven Code Synthesis, Augmented Testing
